

UP-N-OUT[®]

ULTIMATE MARINE LADDERS By Scandia Marine Products

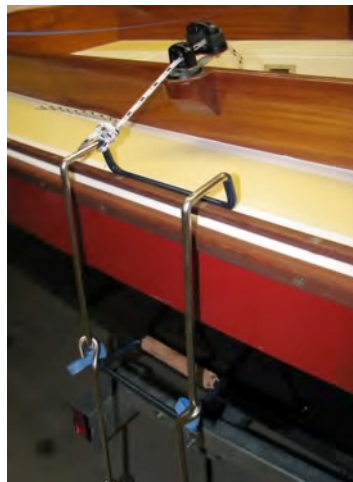

Congratulations! You have purchased an Up-N-Out dinghy ladder built especially for hard sides/transoms and decked boats. It is very durable and should last you a lifetime.

The angle of the mounted ladder should enter the water about 5 to 15 degrees from vertical away from the side of the boat. This will keep the ladder straight (vertical) when climbed.

The 2 hooks are set to fit over a 2" thick transom or gunnel and the line is used as a tether. If the ladder will be used on a decked boat, then the line should be attached inboard to a strong attachment point.

Transom Mount

Hard Side Mount

Decked Boat Mount

Thank You & Happy Boating,
